

# USER'S MANUAL USB NETWORK CABLE

BF-110N

## 1. Introduction

Congratulations on your purchase of the Net-LinQ: an USB-USB Network Bridge cable. This Net-LinQ USB Network Bridge cable provides a quick and easy solution to network up to 17 USB computers via hot Plug and Play technology without adding any network interface card. It is suitable for small offices, home offices, mobile users, and network gamers.

Net-LinQ USB Network Bridge cable allows you easily to construct a network via USB port, share all the resources such as files, printer' s peripheral equipments, etc.

## 2. Package Content

- Hardware: USB-USB Network Bridge cable, USB A-B cable
- Software: Net-LinQ driver software
- User' s Manual or Quick Guide

## 3. Product Features

- USB specification revision 1.1 compliant
- USB host to host communication, Single cable solution for network communication, construct USB Network up to 17 PCs
- Resources sharing such as Printers, CD-ROMs, Modems, Scanners, etc.
- Support TCP/IP, NetBEUI, IPX/SPX protocols
- Standard Windows<sup>®</sup> Explorer user interface
- Data transfer rate: Up to 5M bits/sec

## 4. System Requirements

- IBM PC 486DX4-100 MHz or higher or compatible system
- Available USB port
- CD-ROM drive
- Windows<sup>®</sup> 98, Windows<sup>®</sup> ME, Windows<sup>®</sup> 2000, Windows<sup>®</sup> XP

## 5. Driver Installation (WIN98&ME)

**Before you start installing the driver, please Don' t plug your USB-USB Network Bridge Cable into the USB port of your computer.**

Follow the steps below to install driver of the USB-USB Network Bridge Cable:

- 5.1 Power on the computers where you will connect USB-USB Network Bridge cable and make sure that the USB port is enabled and working properly.
- 5.2 Insert the USB-USB Network Bridge driver into the CD-ROM drive and run the **D:\Driver\BF-110N\USB-USB network bridge V1.8.0.0.exe** (D: represents CD-ROM drive) program inside the driver diskette.
- 5.3 The InstallShield Wizard will guide you step-by-step to complete the installation process.

- 5.4 In **Choose Destination Location** Window, you can either install USB-USB Network Bridge driver to **C:\program files\ USB-USB Network Bridge Driver V1.8.0.0** or you can install it to the specified directory you want. Click **NEXT**.

- 5.5 The InstallShield Wizard will pop-up a Question Window. If the computer you installed is not a bridge computer. (Please refer to the section of **Bridge Driver installation** below) you must click “**No**”, but in case of you are on the bridge computer, you have to click “**Yes**”. Because this “**USB-USB Bridge Protocol**” **must not be installed on more than one computer in the USB LAN**

- 5.6 Click **Finish** to complete the setup process.

- 5.7 During the installations, the system may ask you to insert the Windows<sup>®</sup> 98 CD-ROM, please insert your Windows<sup>®</sup> 98 CD-ROM into your CD-ROM drive then click **OK**.

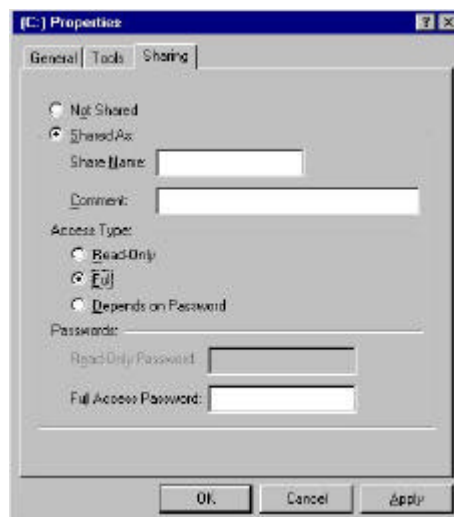

- 5.8 If the system cannot find any file, please direct to your CD-ROM drive and click **OK**.

- 5.9 The system will ask you to reboot the computer when the installation is complete. Please remove the driver from your CD-ROM drive, connect the USB-USB Network Bridge cable and restart Windows<sup>®</sup> system

**Attention: If the following screen appears, do not bypass it or you will not be able to access your network.**

- 5.10 Since USB-USB Network Bridge V1.8 has finished installing the network driver during the installation, your USB network environment is set up automatically when the installation is complete. Now you can see all the computers in your network in Network Neighborhood and you can share programs, files and other peripheral devices through the standard Windows<sup>®</sup> interfaces, e.g. Windows<sup>®</sup> Explorer and Network Neighborhood.
- 5.11 To start sharing the resources, please follow the instructions below. Click the **Start** menu, point to **Programs\Windows Explorer**.
- 5.12 Expand the desktop and select the drive, folder, file or printer you want to share.
- 5.13 Move mouse cursor and click right button on the resource.
- 5.14 Select **Sharing**.
- 5.15 Select **Shared As** and enter the **Shared Name** to be recognized by other computers.
- 5.16 Select an access type. For example, choose **full** to give the complete access right to this resource or **Read-Only** to give others the read-only right to the resource.
- 5.17 Click **OK**.

**Note:** When the installation is complete, system will assign IP address and Submask automatically. Don't try to change any settings unless you are an Expert network user. Any improper settings would cause system fail on some network functions.

## 6. Driver Installation (WIN2000)

**Before you start installing the driver, please don't plug your USB-USB Network Bridge Cable into the USB port of your computer.**

Follow the steps below to install driver of the USB-USB Network Bridge Cable:

6.1 Power on the computers where you will connect USB-USB Network Bridge cable and make sure that the USB port is enabled and working properly.

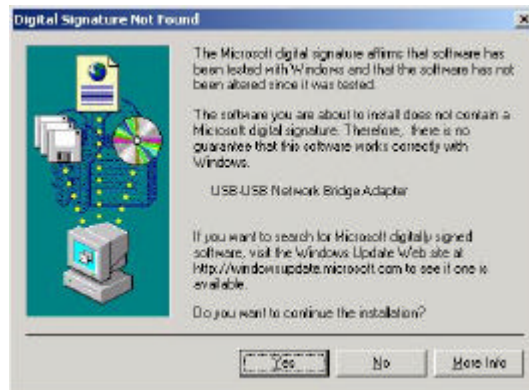

6.2 Insert the USB-USB Network Bridge driver into the CD-ROM drive and run the **D:\Driver\BF-110\USB-USB network bridge V1.8.0.0.exe** (D: represents CD-ROM drive) program inside the driver diskette.

6.3 The InstallShield Wizard will guide you step-by-step to complete the installation process.

6.4 In **Choose Destination Location** Window, you can either install USB-USB Network Bridge driver to C:\program files\ USB-USB Network Bridge Driver V1.8.0.0 or you can install it to the specified directory you want.

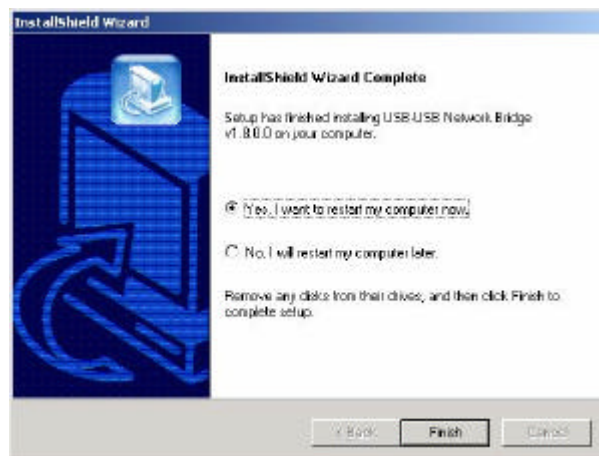

6.5 When the windows appear as below, please click **“Yes”** to continue.

6.6 The InstallShield Wizard will pop-up a Question Window. If the computer you installed is not a bridge computer. (Please refer to the section of **Bridge Driver installation** below) you must click “No”, but in case of you are on the bridge computer, you have to click “Yes”. Because this “**USB-USB Bridge Protocol**” **must not be installed on more than one computer in the USB LAN.**

6.7 Click **Finish** to complete the setup process.

6.8 The system will ask you to reboot the computer when the installation is complete. Please remove the driver from your CD-ROM drive, connect the USB-USB Network Bridge cable and restart Windows system.

**Attention: If the following screen appears, do not bypass it or you will not be able to access your network.**

6.9 Since USB-USB Network Bridge Driver has finished installing the network driver during the installation, your USB network environment is set up automatically when the installation is complete. Now you can see all the computers in your network in Network Neighborhood and you can share programs, files and other

peripheral devices through the standard Windows<sup>®</sup> interfaces, e.g. Windows<sup>®</sup> Explorer and Network Neighborhood.

**Note:** When the installation is complete, system will assign IP address and Submask automatically. Don' t try to change any settings unless you are an Expert network user. Any improper settings would cause system fail on some network functions.

## 7. Driver Installation (WINXP)

**Before you start installing the driver, please don't plug your USB-USB Network Bridge Cable into the USB port of your computer.**

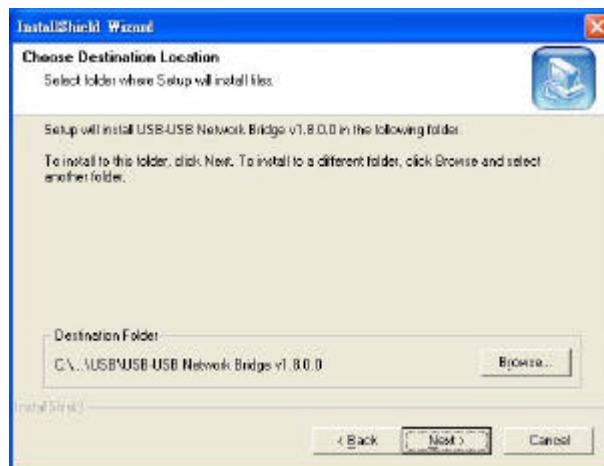

Follow the steps below to install driver of the USB-USB Network Bridge Cable:

7.1 Power on the computers where you will connect USB-USB Network Bridge cable and make sure that the USB port is enabled and working properly.

7.2 Insert the USB-USB Network Bridge driver into the CD-ROM drive and run the **D:\Driver\BF-110\USB-USB network bridge V1.8.0.0.exe** (D: represents CD-ROM drive) program inside the driver diskette.

7.3 The InstallShield Wizard will guide you step-by-step to complete the installation process.

7.4 In **Choose Destination Location** Window, you can either install USB-USB Network Bridge driver to C:\program files\ USB-USB Network Bridge Driver V1.8.0.0 or you can install it to the specified directory you want.

7.5 When the windows appear as below, please click **“Yes”** to continue.

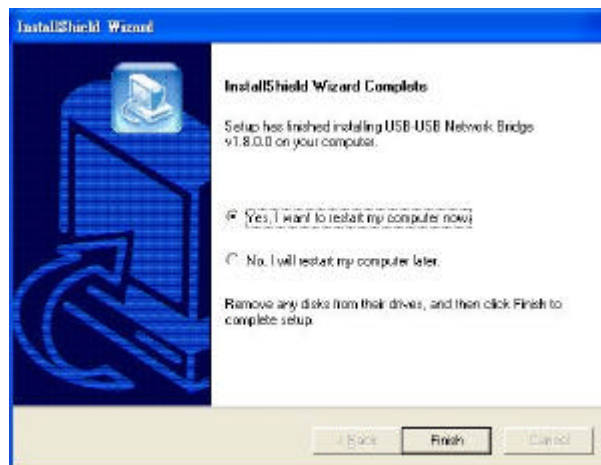

7.6 The InstallShield Wizard will pop-up a Question Window. If the computer you installed is not a bridge computer. (Please refer to the section of **Bridge Driver installation** below) you must click **"No"**, but in case of you are on the bridge computer, you have to click "Yes". Because this **"USB-USB Bridge Protocol"** must not be installed on more than one computer in the USB LAN.

7.7 Click **Finish** to complete the setup process.

7.8 The system will ask you to reboot the computer when the installation is complete. Please remove the driver from your CD-ROM drive, connect the USB-USB Network Bridge cable and restart Windows system.

**Attention:** If the following screen appears, do not bypass it or you will not be able to access your network.

7.9 Since USB-USB Network Bridge Driver has finished installing the network driver during the installation, your USB network environment is set up automatically when the installation is complete. Now you can see all the computers in your

network in Network Neighborhood and you can share programs, files and other peripheral devices through the standard Windows<sup>®</sup> interfaces, e.g. Windows<sup>®</sup> Explorer and Network Neighborhood.

**Note:** When the installation is complete, system will assign IP address and Submask automatically. Don't try to change any settings unless you are an Expert network user. Any improper settings would cause system fail on some network functions.

## 8. TCP/IP Setup: Access Internet through Ethernet

With USB-USB Network Bridge cable, you can access Internet through Ethernet. We need to construct an USB LAN and an Ethernet LAN environment, as the diagram shows below:

## 8. Network Construction

**Computer A:** Connects Computer B with USB-USB Network Bridge cable.

**Computer B:** The **Bridge Computer** which connects Computer A through USB-USB Network Bridge cable and connects Computer C with an Ethernet Adapter.

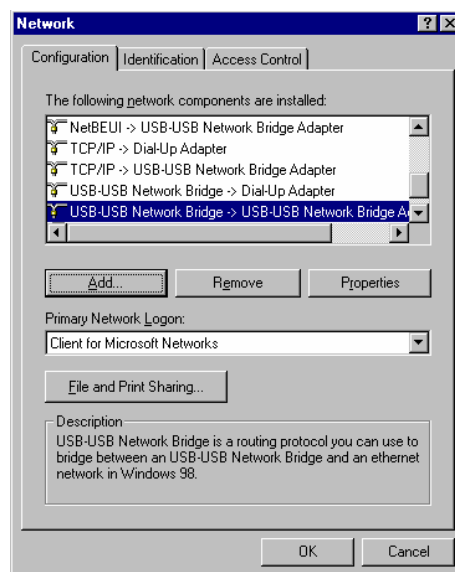

**Computer C:** One PC of the Ethernet LAN connects Computer B with an Ethernet Adapter and can access the Internet directly.

## 9. Bridge Driver Installation

Take this **Network Construction** above as an example, Computer B has to be the **Bridge Computer**, and it needs **Bridge Driver** while installing. The InstallShield Wizard will pop-up a Question Window; In case of **Computer B**, it has to be the **Bridge Computer**, you must click “**Yes**”, but in case of Computer A, you have to click “**No**”. Because this “**USB-USB Bridge Protocol**” must not be installed on more than one computer in the USB LAN.

After you install this **Bridge Driver** on Computer B, there will be one more protocol: **USB-USB Networking Bridge** in the Network Configuration. This is a routing protocol; you can use it to bridge between an USB LAN and an Ethernet LAN.

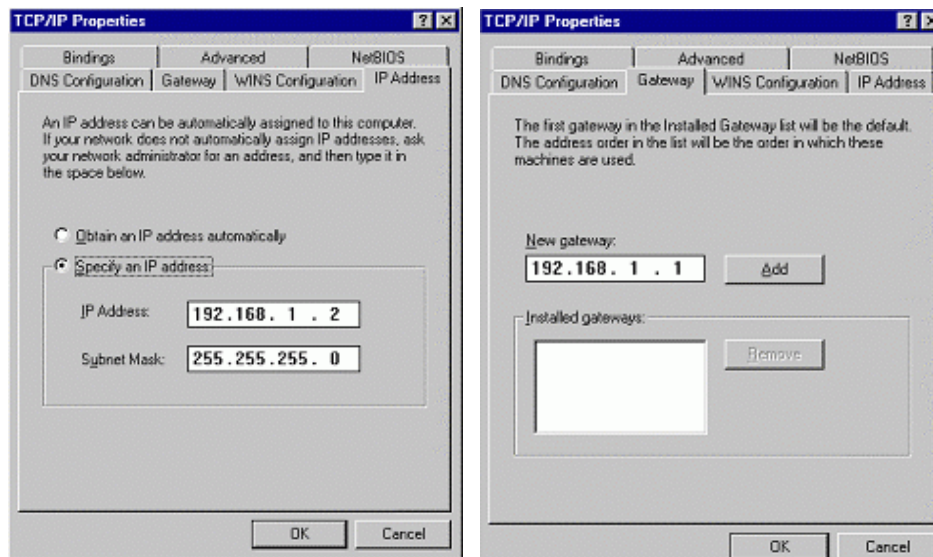

## 10. TCP/IP Setup on Computer A

- 10.1 When all installation processes are completed, you have to **specify an IP address, Subnet Mask and Gateway on Computer A**:
- 10.2 Click the **Start** menu, point to **Setting\Control Panel**. Double click **Network** icon. In **Configuration** tab, select **TCP/IP -> USB-USB Network Bridge Adapter**, and then click **Properties**.
- 10.3 In **IP Address** tab, please choose “**Specify an IP Address**”, and fill in the **IP address and Subnet Mask** value properly. This information should be from your MIS people and make sure this **IP Address**, which is not in use of your **Ethernet**, or it will cause a network failure.

10.4 In **Gateway** tab, you must specify a proper value. This IP Address of Gateway should be the same with the other Computers in the Ethernet.

10.5 When complete all these TCP/IP setup processes, you have to restart your computer again. After that, the **Computer A** can use USB-USB Network Bridge cable to connect Computer B to **access the resources of Ethernet (File, CD-ROM, and Scanner sharing) and execute all the functions on Internet (WWW, Email, FTP, Telnet, Gopher... etc.).**

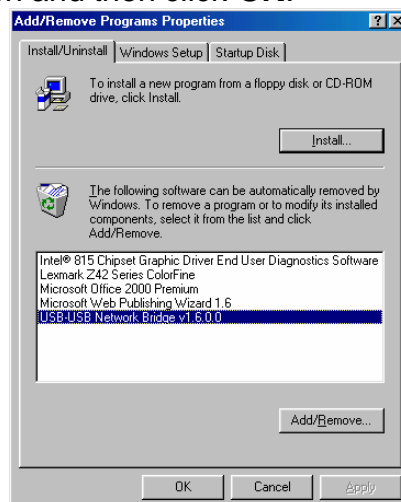

## 11. Driver Uninstallation

11.1 Follow the steps below to remove the the USB-USB Network Bridge driver from Windows<sup>®</sup> system:

11.2 Click the **Start** menu, point to **Settings\Control Panel**. Double click **Add/Remove Programs** icon.

11.3 In **Install/Uninstall** tab, select **USB-USB Network Bridge Driver V1.8.0.0**

11.4 Click **Add/Remove** button and then click **OK**.

11.5 Restart Windows<sup>®</sup> system.

## 12. Troubleshooting

If you have successfully installed the driver, but can't see either your or the other computers' names in Window's Network Neighborhood, please check the following points.

- 12.1 Make sure the USB-USB Network Bridges Cables are firmly connected to the USB ports of your computers or USB hubs.
- 12.2 Click the **Start** menu, point to **Settings\Control Panel**. Double click **Network** icon. In **Identification** tab, ensure each computer has been given a unique name, not to conflict with each other. Make sure the **Workgroup** name is the same for all the computers in the network.

- 12.3 In **Configuration** tab, check the **USB-USB Network Bridge Adapter** is in the following network components are installed list.

- 12.4 In **Configuration** tab, click **File and Print Sharing** button. Make sure both **I want to be able to give others access to my files** and **I want to be able to allow others to print to my printer(s)** functions are selected. It would cause the **File and printer sharing for Microsoft networks** service be installed and enable this computer to share its files and printers to the others.

After checking all these points, if the network is still not working properly, please contact your supplier instead of revising the settings by yourself unless you are an expert network user.

### **13. Disclaimer**

Information in this document is subject to change without notice. The manufacturer does not make any representations or warranties (implied or otherwise) regarding the accuracy and completeness of this document and shall in no event be liable for any loss of profit or any other commercial damage, including but not limited to special, incidental, consequential, or other damages.

### **14. FCC Statement**

This device generates and uses radio frequency and may cause interference to radio and television reception if not installed and used properly. This has been tested and found to comply with the limits of a Class B computing device in accordance with the specifications in Part 15 of FCC Rules. These specifications are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation. If this device does cause harmful interference to radio or television reception, which can be determined by plugging the device in and out, the user can try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the device and receiver.
- Connect the computer into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
